MOBILE SOFTWARE DEVELOPER (REMOTE), PETDRIFTS, CANADA, JAN - APR 2023

Responsible for designing and implementing screens and other frontend components for PetDrifts mobile application. Integrated APIs for fetching user and other app data from backend server. Substantially enhanced app efficiency by using React's Context API. Used CPU, memory and graphics profiling methods to improve app performance. Implemented Bluetooth connectivity of the app to a physical ESP32 device. Successfully deployed apk builds in Google Play Store.

FRONTEND DEVELOPER (REMOTE), BETIYAN NIDHI LIMITED, INDIA, AUG - DEC 2022

Responsible for planning and taking important decisions about the UI/UX of the website. Led a team of frontend developers through the entire project lifecycle, from conception to deployment, ensuring alignment with project goals and client requirements. Orchestrated daily stand-ups and sprint planning sessions, fostering a collaborative and agile development environment. Collaborated closely with backend developers to integrate frontend components with APIs provided by backend server. Website link - https://betiyannidhi.com/

Projects

PHONEBOOK, (WEB APPLICATION)

Phonebook is a full-stack web application developed using React.js (Semantic UI) for frontend, Nodejs (Express) for backend and Postgres for database.

EXPENSE TRACKER, (MOBILE APPLICATION)

Expense Tracker is a React Native mobile application styled using RNUI Themed and React Native Elements, with data visualization powered by React Native Chart Kit designed to track daily expenses and visualize the spending patterns through interactive graphs.

HASKELL SNAKE, (HASKELL APPLICATION)

Haskell-Snake is the classic snake game developed using Haskell's Bricks library. The game can run on terminal and offers various modes and includes a high score feature for tracking players' best achievements.
